The screenshot displays the IPNext Web-Based Management interface within a Windows Internet Explorer browser window. The browser's address bar shows the URL `http://172.16.31.20/`. The main content area features a dark blue background with a world map and a person using a laptop, with the text "AddPac Technology Smart Network Management System" and a copyright notice "© AddPac Technology, all rights reserved".

Two callout boxes highlight specific features:

- Automatic version check:** A yellow box with an arrow pointing to the top right of the main interface.
- New S/W version update:** A yellow box with an arrow pointing to the bottom right of the main interface.

Two Windows dialog boxes are overlaid on the interface:

- Launching Application:** A dialog box with a blue title bar and a close button. It contains a progress bar and the text "Verifying application requirements. This may take a few moments." Below the progress bar are icons of a computer and a globe.

# Network Resource Management

- Network resource management with hierarchical structure
- Role-based resource management for each administrator

The screenshot displays the AddPac Network Resource Management interface. On the left, a hierarchical tree view shows the network structure under 'Current Outage Devices (11)'. The tree includes nodes for 'AddPac' (AddPac Technology Co.,Ltd.), 'Branch AQ', 'Branch GX', 'Branch KT', 'HeadQuarter' (Main HeadQuarter Center), 'Seoul' (Seoul subnetwork), 'Seoul East Area' (Seoul East Area), 'Subnetwork #2' (Subnetwork #2), 'Center' (Gangdong Area Center), 'SongPaGu Ar...' (SongPaGu Area Center), 'Seoul North Area' (Seoul North Area), 'Seoul South Area' (Seoul South Area), 'Branch A', 'Branch B', 'GangNamGu' (GangNamGu), 'Branch TG' (Yeoksam Area), 'SeoChoGu' (seoul secho district), 'Seoul West Area' (Seoul West Area), 'Gangseo Area' (Gangseo Area), and 'Seoul' (Seoul), 'MokDong Area' (MokDong Area).

In the center, a table lists device categories:

Category Name	Description
Desktop	PC, notebook, laptop, etc
Network Camera	Network Camera Category
Phone	IP Phone, Video Phone
Server	PBX, RBT, UMS, Presence
Switch	Network Switch
VoIP Gateway	AddPac Digital(or Analog) Gateway

On the right, the 'User Properties' dialog box is open, showing a 'Site' tab with a tree view of the same hierarchical structure. A context menu is open over the 'GangNamGu' node, with 'Execute SMM' highlighted. The menu options are: 'Add Sub Network', 'Add Site', 'Delete', 'Execute SMM', 'Search (Ctrl+F)', 'Refresh (F5)', and 'Properties'.

Three orange callout boxes provide additional context:

- manage the complex network with a structured, hierarchical form (pointing to the tree view)
- can assign the hierarchical node to the operator and manage role-based policy (pointing to the 'Execute SMM' menu item)
- can cooperate with the application executables such as SMM (pointing to the 'Execute SMM' menu item)

# Device Fault Management

The screenshot displays the Smart Network Management System (NMS) interface within a Windows Internet Explorer browser. The address bar shows the URL `http://172.16.31.20/smartnms.htm`. The interface features a top navigation bar with tabs for NMS, Account, Configuration, Monitoring, Notification, Fault, Statistics, and View. Below this is a toolbar with various icons for system management. The main content area is divided into several sections:

- Left Panel:** A tree view showing the network hierarchy, including sites like AddPac, Seoul, and GangnamGu, with sub-nodes for branches and areas.
- Top Right Panel:** A search and filter area with dropdown menus for 'Group Type' and 'Site', and buttons for 'Refresh', 'Import', and 'New Tab'.
- Central Panel:** A grid of device status icons. Each icon represents a device with a status indicator (green for OK, red for fault, yellow for warning). A red arrow points to the 'NMS Camera' device, which is highlighted with a red box. An orange callout box next to it contains the text: "device status matrix with small view mode".
- Bottom Panel:** A table titled "Your Outstanding Notices (18)" listing various alerts. The table has columns for Ack, ID, Send Time, Site, Device Name, IP Address, Service, and Message. The messages describe service outages and failures for various devices.

At the bottom of the browser window, the status bar shows the date and time as "4/13/2009 3:14:58 PM", the IP address "172.16.31.20:5101", the user "admin", and the version "Version 1.2.3384".

# Device Fault History Management

The screenshot displays the Smart Network Management System (NMS) interface. The main window shows a list of events with columns for Ack, ID, Send Time, Site, Device Name, IP Address, Service, and Message. A 'Troubleshooting Note' dialog box is open, allowing users to enter a note for a specific event. The dialog box includes a 'Status' dropdown menu, a text area for the note, and buttons for 'Add', 'Edit', 'Delete', and 'Close'. An orange callout box with the text 'Can write troubleshooting note if needed' points to the text area in the dialog box.

# Current Device Fault (Outage)

The screenshot displays the Smart Network Management System (NMS) interface. The main window shows a tree view of network devices on the left and a table of current outages in the center. A red box highlights the 'Current Outage Devices' table, with an annotation: "Display the current all device faults".

An 'Event Detail (ID: 45412)' dialog box is open, showing details for the selected outage. It includes fields for Event Time, Site, Service, Time Acknowledge, Log Message, and Description. The description reads: "device 00\_RBT\_server's all interface down. A new Outage record has been created and service level availability calculations will be impacted until this outage is resolved." Below the description is a 'Troubleshooting Note List' table with columns for Time, User, Status, and Note.

Another annotation points to the 'Event Detail' dialog box: "Can view the event data related to the current device fault and can write troubleshooting note if needed".

At the bottom of the interface, there is a section for 'Your Outstanding Notices (18)' with a table listing various notices and their details.

# Event Notification Management

The screenshot displays the Smart Network Management System (NMS) interface. The main window shows a tree view of devices on the left, a table of event notifications in the center, and a detailed 'Event Notification Properties' dialog box on the right. Three orange callout boxes provide instructions:

- apply notification policy with event-based filter** (example : notify me when network link of device is down through SMS, e-mail)
- specify category when each event occurs**
- describe notification message content for e-mail or SMS**

The 'Event Notification Properties' dialog box shows the following configuration:

- Notification Name: serviceUnresponsive
- Description: test
- Event: Node event: serviceUnresponsive
- Destination Path: default
- Notification Type: sms, alarmLamp, email
- Current Rule: IPADDR IPLIKE \*\*\*\*
- Apply Category: Desktop, Network Camera, Phone, Server, Switch
- Email Subject: Notice #noticeid% %service% service on %interfaceresolve% (%interface%)
- Text Message: The %service% poll to interface %interfaceresolve% (%interface%) on node %nodelabel% successfully completed a synthetic connection to the service listener on the remote machine. However, the synthetic transaction failed to complete within %iparm(timeout)% milliseconds, over %iparm(attempts)% attempts. This event will NOT impact service level agreements, but may be an indicator of other problems on that node.
- Special Values: Can be used in both the text message and email subject: %noticeid% = notification ID number, %time% = time sent, %severity% = event severity, %nodelabel% = may be IP address or empty, %interface% = IP address, may be empty, %service% = service name, may be empty, %eventid% = event ID, may be empty.
- Note: If the alert exceeds 80 bytes then the notification will be dispatched in two or more sms.
- Enable Notification:
