# Current Device Fault (Outage)

The screenshot displays the Smart Network Management System (NMS) interface. The main window shows a tree view of network devices on the left and a table of current outages in the center. A red box highlights the '00\_RBT\_server' device in the tree and its corresponding entry in the 'Current Outage Devices' table. An orange callout box points to the '00\_RBT\_server' entry in the table, stating 'Display the current all device faults'. Below the table, an 'Event Detail (ID: 45412)' window is open, showing event information such as Event Time (4/10/2009 9:26:04 PM), Site (/AddPac/Branch GX), Device Name (00\_RBT\_server), and Severity (Critical). The description of the event states: 'device 00\_RBT\_server's all interface down. A new Outage record has been created and service level availability calculations will be impacted until this outage is resolved.' An orange callout box points to the description text, stating 'Can view the event data related to the current device fault and can write troubleshooting note if needed'. Below the description is a 'Troubleshooting Note List' table with columns for Time, User, Status, and Note. The bottom of the interface shows 'Your Outstanding Notices (18)' and system information.

- Email Subject: Notice #noticeid%: %service% service on %interfaceresolve% (%interface%)
- Text Message: The %service% poll to interface %interfaceresolve% (%interface%) on node %nodelabel% successfully completed a synthetic connection to the service listener on the remote machine. However, the synthetic transaction failed to complete within %iparm(timeout)% milliseconds, over %iparm(attempts)% attempts. This event will NOT impact service level agreements, but may be an indicator of other problems on that node.
- Special Values: Can be used in both the text message and email subject.
  - %noticeid% = notification ID number
  - %time% = time sent
  - %severity% = event severity
  - %nodelabel% = may be IP address or empty

# Service Definition

The screenshot displays the Smart NMS web interface. On the left, a tree view shows the network hierarchy under 'AddPac'. The main area shows a list of services with columns for Name, Protocol, and Port. The 'Camera Operation Status' service is highlighted. A 'Service Properties' dialog box is open, showing the configuration for this service. The 'General' tab is active, and the 'SNMP' protocol is selected. The 'Service Name' is 'Camera Operation Status', and the 'Port' is '161'. The 'Interval' is set to '30000' (msec), 'Timeout' is '3000' (msec), and 'Retry' is '3'. A second 'Service Properties' dialog box is also visible, showing the 'Service Condition' configuration with 'Operator' set to '=' and 'Operand' set to '1'. At the bottom, a table shows 'Your Outstanding Notices (18)' with columns for Ack, ID, Send Time, Site, Device Name, IP Address, Service, and Message.
